

A Case Study

Domestic Driveway 2

Project Details**EcoGrid utilised as ground reinforcement for gravel driveway****Client Details****Private****Contractor Details****D Mckiernan Groundworks, Chorlton, Manchester**

David from D Mckiernan Groundworks in Chorlton Manchester got in touch with us in regards to a front driveway and side entrance installation.

We advised upon using our EcoGrid E40 paving, as this would be sufficient for the use case of parked vehicles. As the customer wished to have a gravel driveway, our grid was perfect for retaining the infill layer giving an aesthetic finish.

Not only will the specified grid be suitable for the weight load, but its permeable features would remove any gathered rainwater / puddles at the front or side entrance of the home.
