Contractor Details

Authority engineers

This is a car park laid in 2016, it consists of a mixture of EcoGrid-Ecoraster E50 and Bloxx with a natural concrete inset. The images below show how easy it is to clear a heavy snow fall from EcoGrid.

As you can see, the snow was fairly deep and could not be accessed prior to treatment. Within a very short period of time, the area was cleared and ready for a scattering of rock salt, which does not affect the grids as they are fully resistant to all chemicals, frost and UV radiation.
