

 **ECOGRID[®]**

A Case Study
Horse Walker

Project Details**EcoGrid TE50 used for a horse walker in the Wampen equestrian centre****Client Details****Private horse owner****Contractor Details****Ecora GmbH, Germany**

The equestrian centre in Wampen is set in a beautiful location in the Fichtel mountains. The new state-of-the-art, roofed horse walker is also a sight to behold.

When the centre was taken over by Fabien Tandler, some of its facilities were completely overhauled. Now, since the beginning of 2013, fans of equestrian sports from the region have had the perfect place to pursue their passion. Fabien Tandler, who has enjoyed show-jumping success at national level, is an experienced trainer; a great believer in the importance of quality surfaces and useful areas. After looking at different providers, she soon opted for our tried-and-tested EcoGrid grid, as value for money, service and function won her over in all respects.

In only 7 days, our distributor Ecora completed the construction of a state-of-the-art horse walker with an EcoGrid reinforced floor, roof, fence and automated paddles. For the walkway, we installed the robust EcoGrid TE50, a grid specially developed for horse walkers and which withstands even the heaviest loads. Infilled with a high quality quartz sand layer, it provides both horse and handler with the ideal conditions underfoot for safe exercise that is easy on the joints.

Surface filled with quartz sand, gentle on joints, elastic and strong.
