Contractor Details

On-site

Mud creates an unsafe and unhealthy environment for humans and livestock which can lead to illness and injury. EcoGrid offers an effective mud management solution that helps you solve your mud problems easily and permanently.

**The EcoGrid Solution:**

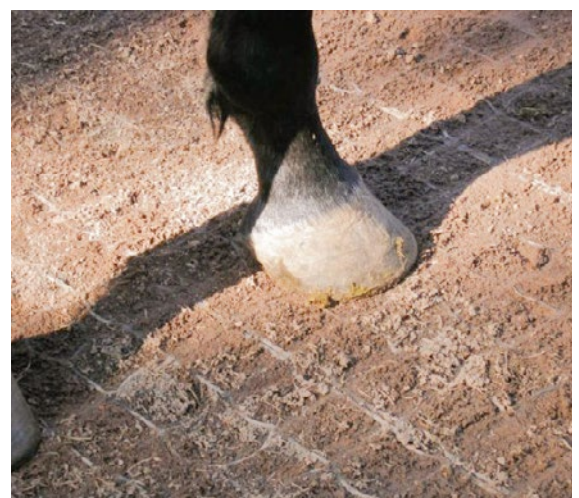

Works like a snowshoe where the grid disperses load over a larger surface area, thus preventing soil compaction.

Less soil compaction results in improved water drainage.

EcoGrid also separates the footing aggregate from the sub-base, further improving drainage.

Virtually maintenance free.

Tough and durable, EcoGrid will withstand the toughest of environmental conditions for many years.
