Simple and swift installation

With the speedy implementation of smart motorways to the UK. There is always going to be a health and safety issue. Emergency stopping places will have to be installed and at far more regular intervals than originally planned. EcoGrid provides a sustainable approach to this problem. A lorry bearing grid system that is temperature resistant to + - 90 degrees, frost proof, resilient to all salts and chemicals, UV stable, has a point loading of 40tonnes (articulated lorries), is carbon neutral, completely permeable, swift and simple to fit.

In the example below, EcoGrid E50 was used and our complimentary A50 grid with our angled accessory could have also been used to retain the embankment also.
